Digital Transformation Division - Software Asset Management

2

Agenda

01. System Overview

Introduction to software management challenges and our comprehensive solution approach

02. Core Features

Detailed exploration of asset tracking, procurement workflows, and license management

03. Implementation Benefits

ROI analysis, cost savings, and operational efficiency improvements

04. Next Steps

Deployment roadmap, support structure, and future enhancements

3

System Overview & Challenges

Current Pain Points

Organizations struggle with software sprawl, license compliance risks, and inefficient procurement processes that lead to overspending and security vulnerabilities

Compliance Risks

Unmanaged licenses create legal exposure and audit vulnerabilities across enterprise environments

Cost Overruns

Redundant purchases and unused licenses result in 30-40% waste in software budgets annually
